1) Read / Write Limit

This communication protocol uses devices to simulate the operation of Servo, so there is a limit for the device to read and write the command. In the column of register type and contact type, the string of characters after "cmd:" indicates the corresponding Servo command that the device will read and write.

 Parameter List (cmd: 05/84) , the command input 05 is to read and 84 is to write. This register allows both read and write

- 2. **S**tatus display (cmd: 01,8n/NA), the command input 01,8n is to read and NA means this register does not support write command. This register allows read only.
- 3. **OP**eration mode selection (cmd: NA/8B,00) , the command input 8B,00 is to write and NA means this register does not support read command. This register allows write only.
