

DVPDT02-H2

DeviceNet Slave Communication Module Operation Manual

\land Warning

- ✓ Please read this instruction carefully before use and follow this instruction to operate the device in order to prevent damages on the device or injuries to staff.
- Switch off the power before wiring.
- ✓ DVPDT02-H2 is an OPEN TYPE device and therefore should be installed in an enclosure free of airborne dust, humidity, electric shock and vibration. The enclosure should prevent non-maintenance staff from operating the device (e.g. key or specific tools are required for operating the enclosure) in case danger and damage on the device may occur.
- ✓ DVPDT02-H2 is to be used for controlling the operating machine and equipment. In order not to damage it, only qualified professional staff familiar with the structure and operation of DVPDT02-H2 can install, operate, wire and maintain it.
- ✓ DO NOT connect input AC power supply to any of the I/O terminals; otherwise serious damage may occur. Check all the wirings again before switching on the power and DO NOT touch any terminal when the power is switched on. Make sure the ground terminal ⊕ is correctly grounded in order to prevent electromagnetic interference.

1 Introduction

- 1. To ensure correct installation and proper operation of DVPDT02-H2, please read this chapter carefully before using your DVPDT02-H2.
- 2. This chapter only provides introductory information on DVPDT02-H2. Details of DeviceNet protocol are not included. For more information on DeviceNet protocol, please refer to relevant reference or literatures.
- 3. DVPDT02-H2 is a DeviceNet slave communication module, used for the connection between DeviceNet network and DVP-EH2 series PLC MPU.

1.1 Features

- Supports Group 2 only servers.
- Supports explicit connection in the pre-defined master/slave connection group.
- Supports polling.
- Supports EDS files in DeviceNet network configuration tools.
- The length of I/O data can be freely configured through DeviceNet network configuration tool. Re-power it to make effect the configuration.
- I/O data is extendable to 200 bytes.

1.2 Specifications

DeviceNet connection

Transmission method	CAN
Electrical isolation	500VDC
Interface	Removable connector (5.08mm)
Transmission cable	2 communication cables, 2 power cables, 1 shielded cable

Communication

Message type	I/O polling; explicit
Serial transmission speed	125 kbps; 250 kbps; 500 kbps (bits per second)

Electrical specification

Voltage	24VDC (Range: 11 ~ 25VDC)
Current	28mA (typical), 125mA impulse current (24VDC)

Environment

Noise immunity	ESD (IEC 61131-2, IEC 61000-4-2): 8KV Air Discharge EFT (IEC 61131-2, IEC 61000-4-4): Power Line: 2KV, Digital I/O: 1KV Analog & Communication I/O: 1KV Damped-Oscillatory Wave: Power Line: 1KV, Digital I/O: 1KV RS (IEC 61131-2, IEC 61000-4-3): 26MHz ~ 1GHz, 10V/m
Operation	0° C ~ 55°C (temperature); 50 ~ 95% (humidity); pollution degree 2
Storage	-25°C ~ 70°C (temperature); 5 ~ 95% (humidity)
Vibration/shock resistance	Standard: IEC 61131-2, IEC 68-2-6 (TEST Fc)/IEC 61131-2 & IEC 68-2-27 (TEST Ea)
Certificates	IEC 61131-2, UL508

2 Product Profile & Outline

2.1 Dimension

Unit: mm [inch]

2.2 Product Profiles

1. I/O module connection port	6. NS (Network Status) indicator
2. Address switch	7. DeviceNet connection port
3. Function switch	8. DIN rail
4. POWER indicator	9. DIN rail clip
5. MS (Module Status) indicator	

2.3 DeviceNet Connection Port

The connector is used on the connection to DeviceNet network. Wire by using the connector enclosed with DVPDT02-H2.

PIN	Signal	Color	Contect	
1	V-	Black	0 VDC	5 🔳 🗌
2	CAN_L	Blue	Signal-	
3	SHIELD	-	Shielded	2
4	CAN_H	White	Signal+	1
5	V+	Red	24 VDC	

2.4 Address Switch

The switch is used on setting up the node address of DVPDT02-H2 on DeviceNet network.

Switch setting	Content	x10 ¹ 🖀 ຼີ 🕕	
0 ~ 63	Valid DeviceNet node address		
64~ 99	Invalid DeviceNet node address	x10 ⁰ 9	

<u>Example</u>: If you need to set the node address of DVPDT02-H2 to 26, simply switch the corresponding switch of $x10^{1}$ to 2 and the corresponding switch of $x10^{0}$ to 6.

Note:

- Please set up the node address when the power is switched off. After the setup is completed, re-power DVPDT02-H2.
- When DVPDT02-H2 is operating, changing the set value of the node address will be invalid.
- Use slotted screwdriver to rotate the switch carefully in case you scratch the switch.

2.5 Function Switch

The switches are for:

- Setting up I/O data holding function (IN0).
- Setting up baud rates of DeviceNet network (DR0 ~ DR1).

DR1	DR0	Baud rate	
OFF	OFF	125 kbps	
OFF	ON	250 kbps	
ON	OFF	500 kbps	
ON	ON	Incorrect setting	
INO	OFF	When the DeviceNet connection is interrupted, the content in the buffer area will not be held.	
INO	ON	When the DeviceNet connection is interrupted, the content in the buffer area will be held.	
IN1	Reserved		

DR 1		4	1 N
DR 0		(1)	L
IN 1	¢	\sim	
IN 0		_	10

Note:

- Please set up the switch when the power is switched off. After the setup is completed, re-power DVPDT02-H2.
- When DVPDT02-H2 is operating, changing the setting of the switch will be invalid.
- Use slotted screwdriver to adjust the switch carefully in case you scratch the switch.

2.6 I/O Module Connection Port

The I/O module connection port on DVPDT02-H2 is used for the connection to the next DVPDT02-H2 or I/O modules of DVP-EH2 series PLC MPU.

3 Basic Operation

3.1 Connecting DVPDT02-H2 to DVP-EH2 Series PLC MPU

• Open the connection port on the right hand side of DVP-EH2 and connect DVPDT02-H2 to DVP-EH2.

3.2 Install DVP-EH2 and DVPDT02-H2 on DIN Rail

- Use 35mm DIN rail.
- Open the DIN rail clip on DVP-EH2 and DVPDT02-H2. Insert DVP-EH2 and DVPDT02-H2 onto the DIN rail.
- Clip up the DIN rail clips on DVP-EH2 and DVPDT02-H2 to fix DVP-EH2 and DVPDT02-H2 on the DIN rail.

3.3 Connecting to DeviceNet Connection Port

- The colors of the PINs on the DeviceNet connection port match the colors of the connection cables. Make sure you connect the cable to the right PIN.
- We recommend you also apply Delta's power module in the connection.

4 Configurating DVPDT02-H2

- 4.1 Format of Request Message and Response Message
 - 1. DVPDT02-H2 supports polling by standard DeviceNet explicit messages.
 - Format of request messages :

Byte position	Data written into special I/O module	Data read from special I/O module	
0	Frag[0]+XID+MAC ID	Frag[0]+XID+MAC ID	
1	R/R[0]+Service Code [0x10]	R/R[0]+Service Code [0x0E]	
2	Class ID [0x95]	Class ID [0x95]	
3	Instance ID	Instance ID	
4	Attribute ID	Attribute ID	
5	Low byte of Service Data	N/A	
6 High byte of Service Data		N/A	
7 N/A		N/A	

Format of response messages

Byte position	Data written into special I/O module	Data read from special I/O module
0	Frag[0]+XID+MAC ID	Frag[0]+XID+MAC ID
1	R/R[1]+Service Code [0x10]	R/R[1]+Service Code [0x0E]
2		Low byte of response data
3		High byte of response data

- 2. Definitions of DeviceNet Objects for DVPDT02-H2:
 - Class 0x95 DVPDT02-H2 I/O data configuration object

Class attribute

Attribute ID	Access rule	Name	Data type
1	Get	Revision	UINT

Instance

Instance ID	Access rule	Name	Range	Default	Explanation
1	Get	Model code	25136	25136	The model code of DVPDT02-H2: 25136 (H'6230)
2	Get	Firmware version	0 ~ 65,535	N/A	The firmware version of DVPDT02-H2.
3	Get	Node address	0 ~ 63	N/A	The node address of DVPDT02-H2.
4	Get	Serial transmission speed	0~2	0	The communication speed of DVPDT02-H2.
5	Get/Set	Length of input I/O data	0 ~ 200	32	Unit: byte
6	Get/Set	Length of output I/O data	0 ~ 200	32	Unit: byte

Instance attribute

Attribute ID	Access rule	Name	Range	Default	Explanation
1	Get/Set	Parameter value	N/A	N/A	The present parameter value.
2	Get	Length of connection path	N/A	N/A	The length of connection path (Attribute 3). "0" refers to the connection path is not designated. Unit: byte
3	Get	Connection path	N/A	N/A	Polling path of the parameter value. Max. connection path: 255 bytes
4	Get	Descriptor	0 ~ 127	N/A	The descriptor of parameter.
5	Get	Data type	1~8	N/A	The code of data type.
6	Get	Data length	N/A	N/A	Number of bytes occupied by the patameter value (Attribute 1). Unit: byte

Coommon services

Santias asda	Implemented for		Son ico no o	
Service code	Class	Instance	Service na,e	
0x0E	Yes	Yes	Get_Attribute_Single	
0x10	No	Yes	Set_Attribute_Single	

4.2 Control Registers (CR) in DVPDT02-H2

CR#	Attribute	Content	High byte	Low byte
#0	Get	Model name	DVPDT02-H2 model code = H'6230	
#1	Get	Firmware version	Displaying the current firmware version in hex, e.g.g V1.12 is indicated as H'0112.	
#2	Get	Length of I/O data	Length of output I/O data	Length of input I/O data
#3 ~ #102	Get/Set	Output data mappinng	Area for storing data from DVPDT02-H2 to DeviceNet master.	

CR#	Attribute	Content	High byte	Low byte	
#103 ~ #202	Get/Set	Input data mappinig	Area for storing data from DeviceNet master to DVPDT02-H2.		
#203 ~ #215			Set up by the system. DO NOT use it.		
#216 ~ #250			Reserved		
#251	Get	Error	Register for storing errors. See 19.4.3 for error codes.		
#252 ~ #254		Reserved			
#255	Get	MPU status	CR#255 = K0: MPU in STOP status CR#255 = K1: MPU in RUN status		

4.3 Error Codes

Code	Description	How to correct
00	DVPDT02-H2 operates normally.	
E2	I/O off-line	 Check if the network connection is normal. Check if the master operates normally.
F0	Dup_MAC_ID test has failed.	 Make sure DVPDT02-H2 has a unique address. Re-power DVPDT02-H2.
F2	Working power in low voltage	Check if the power of DVPDT02-H2 and MPU is normal.
F3	Entering test mode	Re-power DVPDT02-H2.
F4	Bus-off	Re-power DVPDT02-H2
F5	No network power detected	 Check if the network cable works normally. Check if the network power works normally.
F7	Internal error. GPIO detection error.	Send your DVPDT02-H2 back to the manufacturer for repair.
F8	Internal error. Manufacturingerror.	Send your DVPDT02-H2 back to the manufacturer for repair.
F9	Internal error. Configured memory polling error.	Send your DVPDT02-H2 back to the manufacturer for repair.

5 How to Construct DeviceNet Network by DVPDT02-H2

5.1 Application Example I

♦ Target

Exchanging data between DVP-SV and DVP-EH2 MPU through DeviceNet.

• Constructing DeviceNet network by using DVPDT02-H2

1. Constructing DeviceNet network

2. Configuring DVPDNET-SL network scanner and DVPDT02-H2:

Module	Node address	Baud rate
DVPDNET-SL	1	500kbps
DVPDT02-H2	2	500kbps

 Please check and make sure DVP-EH2 PLC MPU and DVPDT02-H2 module both operate normally. Check also the wiring of the entire network and make sure the power supply on DeviceNet network is normal.

Configuring the network by DeviceNet network configuration tool

- Configuration DVPDT02-H2
 - 1. Open DeviceNetBuilder.

👬 Delta DeviceNetBuilder - Untitled	
File Edit Yiew Network Iools Setup Help

Program explanation

The I/O data mapping between DVPDNET-SL and DVPDT02-H2 is done automatically. You can read or write the control registers in DVPDT02-H2 by editing DFROM or DTO instruction in DVP-EH2 slave PLC, realizing the I/O data mapping between DVPDNET-SL network scanner and the slave PLC. See below for the mapping relation.

Register in DVPDNET-SL		CR in DVPDT02-H2		DVP-EH2 PLC

Use DFROM/DTO instruction instead of FROM/TO instruction.

5.2 Application Example II

The default I/O data length of DVPDT02-H2 is 32 bytes. The configured I/O data length of DVPDT02-H2

through DeviceNet network configuration tool is 200 bytes.

Constructing DeviceNet network:

1. Scan the DeviceNet network by DeviceNetBuilder. After the scan is completed, the nodes on the DeviceNet network will appear on the screen.

Hand Delta DeviceNetBuilder - Untitled						×
File Edit Yiew Network Iools Setur C 20 19 19 19 X 10 10 20 20 20 20 19 19 19 19 20 20 10 10 10 10 10 10 10 10 10 10 10 10 10

5. Click on "Download" to download the I/O data configuration to DVPDT02-H2 and re-power DVPDT02-H2.

6 LED Indicators & Trouble-shooting

There are 3 LED indicators on DVPDT02-H2. POWER indicator displays the status of working power. NS indicator and MS indicator display the connection status of the communication.

6.1 POWER LED

LED status	Indication	How to correct
Off	Power is abnormal.	Check the power of DVPDT02-H2 and DVP-EH2 PLC MPU.
Green light On	Power is normal.	

6.2 NS LED

LED status	Indication	How to correct
		 Check the power of DVPDT02-H2 and see if the connection is normal.
0#	No power, or DVPDT02-H2	2. Check if the node communication on the bus is normal.
Oli	Dup_MAC_ID test yet.	3. Make sure at least one or more nodes on the network are operational at the same time.
		Check if the baud rate of DVPDT02-H2 is the same as that of other nodes.
	DVPDT02-H2 is on-line but	1. Correctly configure it in the master.
Green light flashes	has not established connections to other nodes.	2. Re-download the configured data to the master and set the master to RUN status.
Green light On	DVPDT02-H2 is on-line and isnormally connected to the master	
		1. Check if the network connection is normal
Red light flashes	I/O connections are timed-out.	 Check if the master operates normally.
		 Make sure all the node addresses on the bus are not repeated.
Red ligh On		2. Check if the network installation is normal.
	The communication is down; MAC ID is repeated; no network power; bus-off.	 Check if the baud rate of DVPDT02-H2 is consistent with that of other nodes on the network.
		 Check if the node address of DVPDT02-H2 is a valid one.
		5. Check if the network power is normal.

6.3 MS LED

LED status	Indication	How to correct
Off	No power or off-line.	Check the power of DVPDT02-H2 and see if the connection is normal.
Green light flashes	Waiting for I/O data; no I/O data; DVPDT02-H2 in STOP status.	Switch DVPDT02-H2 to RUN status to start I/O data exchange.
Green light On	I/O data are normal.	
Red light flashes	Configuration problem	 Reset DVPDT02-H2. Re-power DVPDT02-H2.

LED status	Indication	How to correct
Red light On	Hardware error	 Find out the cause of error in CR#251. Send back to the manufacturer for repair if necessary.

6.4 NS LED + MS LED

LED status		Indiantion	How to correct
NS LED	MS LED	mulcation	
Off	Off	No power	Check the power of DVPDT02-H2 and see if the connection is normal.
Off	Green light On	DVPDT02-H2 has not completed the Dup_MAC_ID test yet.	Make sure at least one or more nodes on the network is operational at the same time, and its baud rate is the same as that of DVPDT02-H2.
Red light On	Red light flashes	No network power	 Check if the network cable is correctly connected to DVPDT02-H2. Check if the network power works normally.
Red ligh On	Green light On	Dup_MAC_ID test has failed; bus-off	7 Make sure DVPDT02-H2 has a unique address.8 Re-power DVPDT02-H2.
Red light On	Red light On	Hardware error	Send your DVPDT02-H2 back to the manufacturer for repair.

Appendix A: DeviceNet Objects DVPDT02-H2 Supports

DeviceNet objects

Appendix B: DeviceNet Ojects Defined by DVPDT02-H2

- Class 0x95 DVPDT02-H2 I/O data configuration object
 - Class attribute

Attribute ID	Access rule	Name	Data type
1	Get	Revision	UINT

Instance 1: Model code

Attribute ID	Access rule	Name	Range	Default	Explanation
1	Get	Parameter value	25136	25136	Model code of DVPDT02-H2: 25136 (H'6230)
2	Get	Length of connection path	N/A	N/A	The length of connection path (Attribute 3). "0" refers to the connection path is not designated. Unit: byte
3	Get	Connection path	N/A	N/A	Polling path of the parameter value. Max. connection path: 255 bytes
4	Get	Descriptor	0 ~ 127	N/A	The descriptor of parameter
5	Get	Data type	1 ~ 8	N/A	The code of data type
6	Get	Data length	N/A	N/A	Number of bytes occupied by the parameter value (Attribute 1). Unit: byte

Instance 2: Firmware version

Attribute ID	Access rule	Name	Range	Default	Explanation
1	Get	Parameter value	0 ~ 65,535	N/A	Firmware version of DVPDT02-H2
2	Get	Length of connection path	N/A	N/A	The length of connection path (Attribute 3). "0" refers to the connection path is not designated.

Attribute ID	Access rule	Name	Range	Default	Explanation
					Unit: byte
3	Get	Connection path	N/A	N/A	Polling path of the parameter value. Max. connection path: 255 bytes
4	Get	Descriptor	0 ~ 127	N/A	The descriptor of parameter
5	Get	Data type	1 ~ 8	N/A	The code of data type
6	Get	Data length	N/A	N/A	Number of bytes occupied by the parameter value (Attribute 1). Unit: byte

Instance 3: Node address

Attribute ID	Access rule	Name	Range	Default	Explanation
1	Get	Parameter value	0 ~ 63	N/A	Node address of DVPDT02-H2
2	Get	Length of connection path	N/A	N/A	The length of connection path (Attribute 3). "0" refers to the connection path is not designated. Unit: byte
3	Get	Connection path	N/A	N/A	Polling path of the parameter value. Max. connection path: 255 bytes
4	Get	Descriptor	0 ~ 127	N/A	The descriptor of parameter
5	Get	Data type	1 ~ 8	N/A	The code of data type
6	Get	Data length	N/A	N/A	Number of bytes occupied by the parameter value (Attribute 1). Unit: byte

Instance 4: Serial transmission speed

Attribute ID	Access rule	Name	Range	Default	Explanation
1	Get	Parameter value	0 ~ 2	0	Communication speed of DVPDT02-H2
2	Get	Length of connection path	N/A	N/A	The length of connection path (Attribute 3). "0" refers to the connection path is not designated. Unit: byte
3	Get	Connection path	N/A	N/A	Polling path of the parameter value. Max. connection path: 255 bytes
4	Get	Descriptor	0 ~ 127	N/A	The descriptor of parameter
5	Get	Data type	1~8	N/A	The code of data type
6	Get	Data length	N/A	N/A	Number of bytes occupied by the parameter value (Attribute 1). Unit: byte

Instance 5: Length of input I/O data

Att	ribute ID	Access rule	Name	Range	Default	Explanation
	1	Get/Set	Parameter value	0 ~ 200	32	Unit: byte

Attribute ID	Access rule	Name	Range	Default	Explanation
2	Get	Length of connection path	N/A	N/A	The length of connection path (Attribute 3). "0" refers to the connection path is not designated. Unit: byte
3	Get	Connection path	N/A	N/A	Polling path of the parameter value. Max. connection path: 255 bytes
4	Get	Descriptor	0~127	N/A	The descriptor of parameter
5	Get	Data type	1~8	N/A	The code of data type
6	6 Get Data length		N/A	N/A	Number of bytes occupied by the parameter value (Attribute 1). Unit: byte

Instance 6: Length of output I/O data

Attribute ID	Access rule	Name	Range	Default	Explanation
1	Get/Set	Parameter value	0 ~ 200	32	Unit: byte
2	Get	Length of connection path	N/A	N/A	The length of connection path (Attribute 3). "0" refers to the connection path is not designated. Unit: byte
3	Get	Connection path	N/A	N/A	Polling path of the parameter value. Max. connection path: 255 bytes
4	Get	Descriptor	0 ~ 127	N/A	The descriptor of parameter
5	Get	Data type	1 ~ 8	N/A	The code of data type
6	Get	Data length	N/A	N/A	Number of bytes occupied by the parameter value (Attribute 1). Unit: byte
