ASDA-A+

DELTA ASDA-A+ AC Servo System

ASDA-A+

AC Servo System

ASDA-A+

Applications

Motion

In Tube Bending Machine
In controlling the tube bending, ASDA-A+ series is able to operate stably at high-speed, conduct highly accurate positioning and extend the life of the machine.

In Bending Machine

ASDA-A+ series is able to offer accurate in-dept control and high stability, which not only reduces the low yield in the cutting but also enhances the safety and productivity. Beside, ASDA-A+ series also equals energy-saving, low power consumption and high efficiency.

In Spring Machine

ASDA-A+ series used for driving will not be restricted by the cam of the machine but can conduct processing in different directions for achieving complicated molding. The shortened installation time can further enhance the productivity, and the high resolution is able to ensure the high accuracy.

ASDA-A+ series features encoder with 20-bit resolution (1,280,000p/rev), which perfectly offers more accurate control for the machine tool industry (e.g. the spindle in CNC machine tool, carving machine, injection molding machine, double column type machining center) requiring highly accurate processing. In addition, for equipment requiring high torque output (e.g. winding machine, tube bending machine, packaging and feeding machine), ASDA-A+ series offers high torque from 3kW to 7.5kW (19.1 N.M. ~ 47.74 N.M.).

AC Servo System

ASDA-A+

Features

Functional Characteristics

New-generation, high horsepower ASDA-A+ series not only follows the features of the existing Delta servo products, but also provides the functions which are particularly for industries requiring high torque output and high resolution.

- ◆ Built-in Position/Speed/Torque modes.
- ◆ Easy internal single-axis position control.
- ◆ Feed step control mode (control of cutting).
27 positions can be easily controlled and implemented through the parameter settings and by working with digital inputs/outputs and Modbus communication protocol.
- ◆ Support Modbus communication (RS-485/RS-422/RS-232)
- ◆ Provide high-speed line receiver pulse input (Max. 4MHz)
- ◆ Enhance encoder resolution to 20bit (1280000 p/rev)

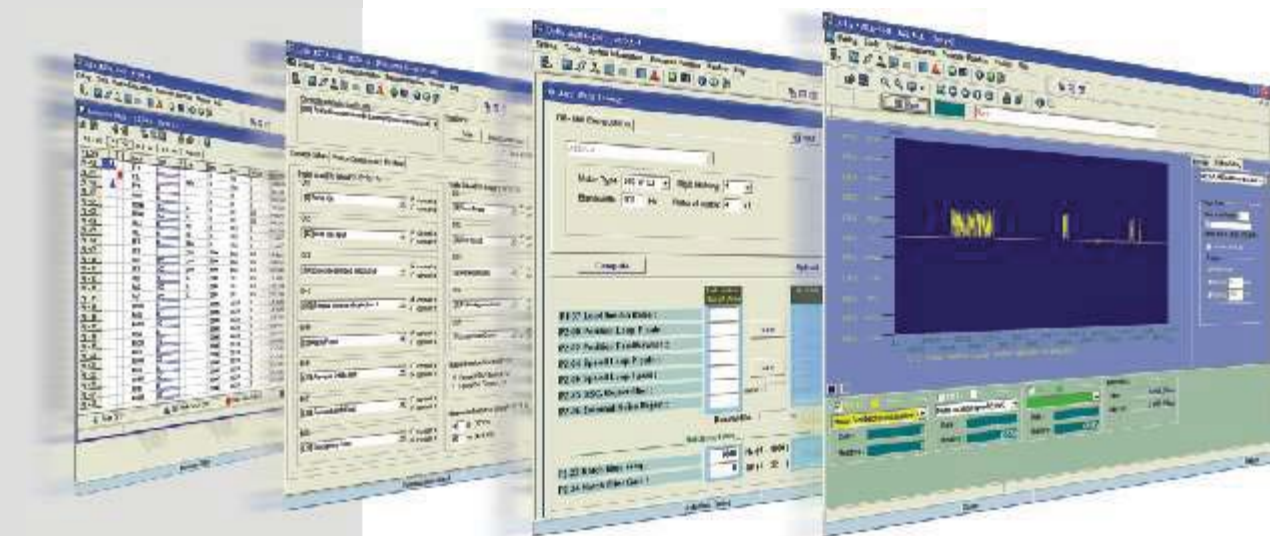

Excellent Performance

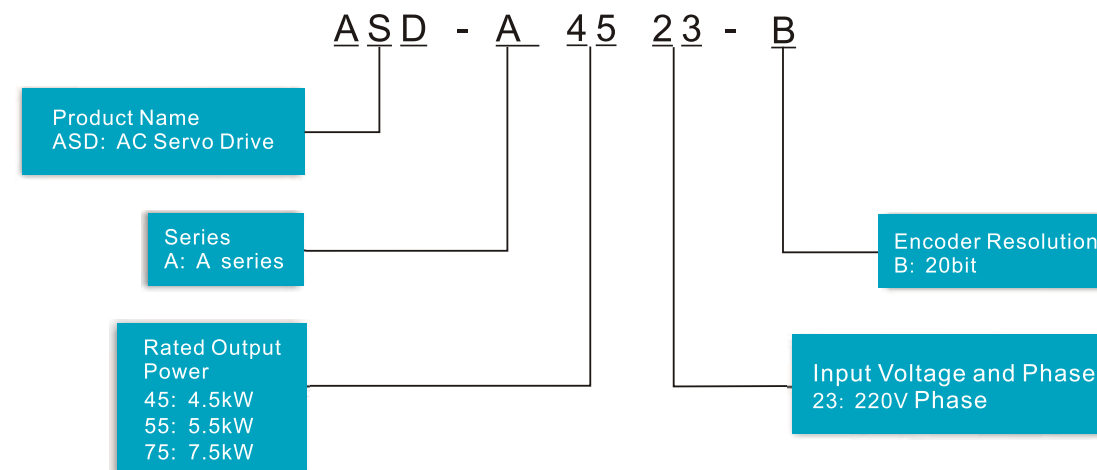

- ◆ Motor settling time below 1msec
- ◆ Speed responsiveness characteristic: 550Hz
- ◆ Great stability and performance at low speed: less than 0.5% error at 1rpm per rotation

ASDA-Soft Servo Software

New version of ASDA-A-Soft servo software has a better interface and is built-in with more functions, greatly enhancing the handiness of the software and considerably shortening the time for the users to get used to ASDA-Soft.

Note

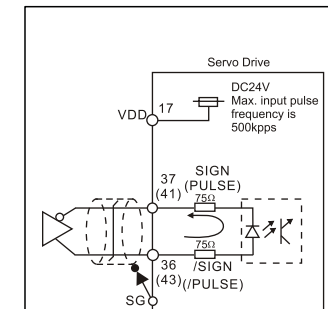

1. Ensure to check if the power supply and wiring of the "power" terminals (R, S, T, & L1, L2) is correct.
2. Ensure to check if the wiring of the "servo motor output" terminals (U, V, & W) is correct.

Position (Pt) Control Mode

Pulse input, for the use of internal power supply (Open-collector input)

Pulse input, for the use of external power supply (Open-collector input)

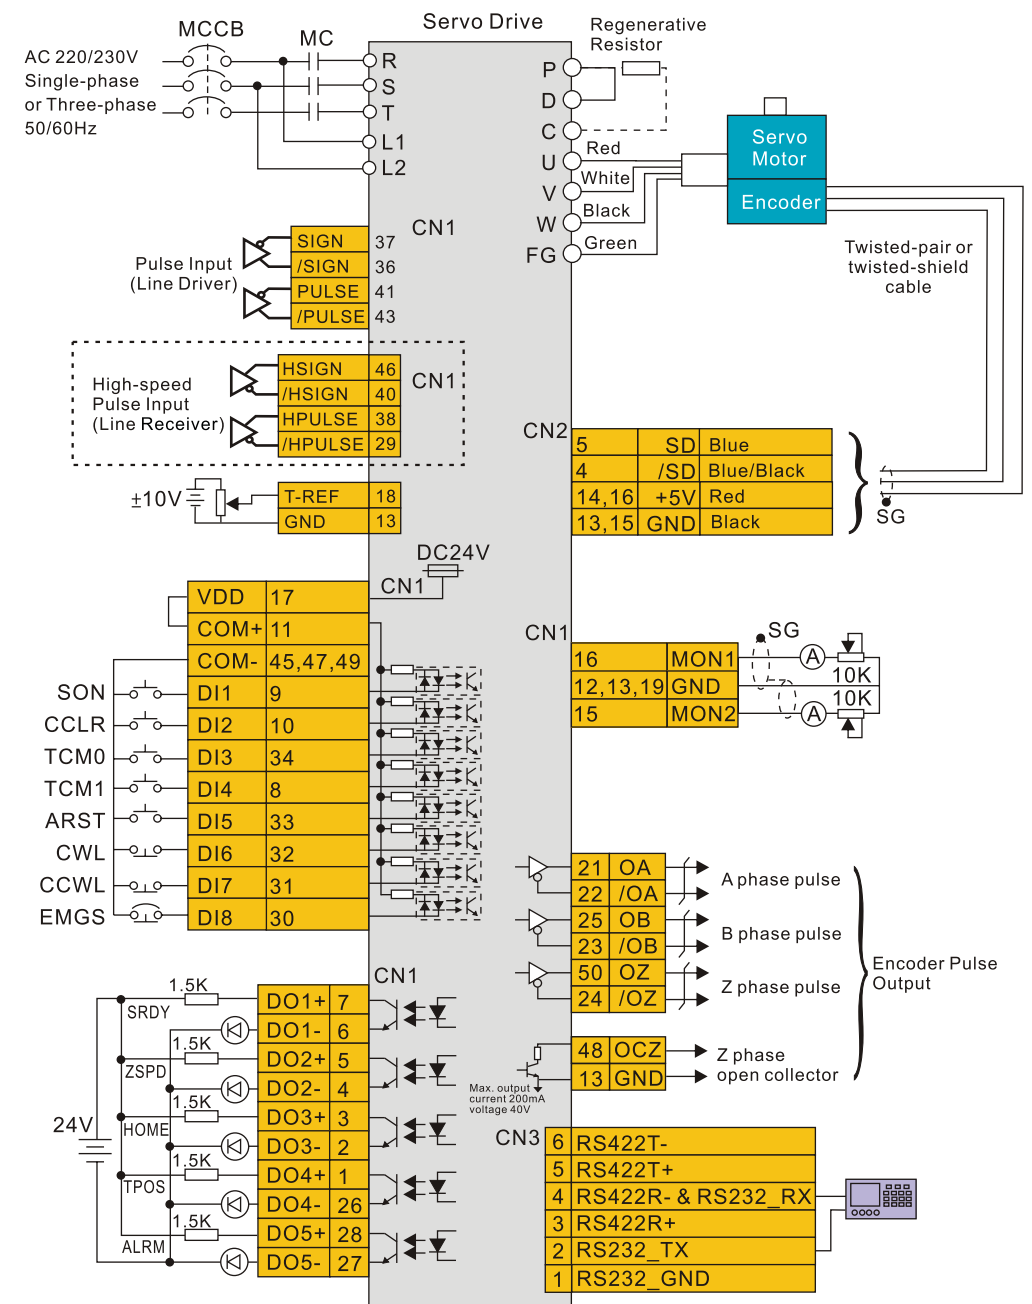

Caution:
Because this photocoupler is a unidirectional optocoupler, please pay close attention on the current direction of input pulse command.

High-speed Pulse input (Line receiver)

Caution: Ensure that the ground terminal of the controller and the servo drive should be connected to each other.

¹1. Rated rotation speed: When full load, speed ratio is defined as the minimum speed (the motor will not pause).
²2. When command is rated rotation speed, the speed fluctuation rate is defined as: (Empty load rotation speed / Full load rotation speed) / Rated rotation speed
³3. TN system: A power distribution system having one point directly earthed, the exposed conductive parts of the installation being connected to that points by protective earth conductor.

Note : 1. When the fault, ALE05 (Regeneration Error) occurs, please increase the regenerative resistor capacity.
2. When combining multiple small-capacity regenerative resistors in parallel to increase the regenerative resistor capacity, make sure that the total resistance value of the regenerative resistors should be lower than the minimum allowable resistance listed in the above table.
